

CYBERSECURITY SOLUTIONS AND SERVICES

Unified Cybersecurity for the Modern Enterprise

EXECUTIVE SUMMARY

Integrated Defence for an Evolving Threat Landscape

Modern cyber threats no longer target isolated vulnerabilities. They exploit the gaps between disconnected security systems.

Today's enterprise demands a cohesive, intelligence-driven approach spanning every vector: network, perimeters, endpoints, identities, applications, data pipelines, OT environments and cloud workloads.

Intcom integrates multi-vendor cybersecurity solutions that help organisations:

- Reduce attack exposure across critical infrastructure
- Strengthen threat visibility and incident response
- Secure hybrid users, applications and cloud environments
- Improve operational resilience and business continuity
- Support regulatory and compliance readiness
- Simplify complex security environments through integrated architectures

Security Technology Partnerships

OUR STRATEGIC APPROACH – CORE PILLARS

PROACTIVE DEFENCE

Anticipate Threats Before They Materialise

We deliver threat intelligence, continuous vulnerability management and attack surface monitoring solutions from leading technology partners, helping organisations identify and mitigate risks early, shifting security operations from reactive response to proactive defence.

COMPLIANCE ALIGNMENT

Security Built to Regulatory Standards

Our solutions help organisations align with CERT-In, ISO 27001, GDPR, SEBI, RBI and industry-specific mandates. We enable practical security controls that support regulatory readiness while strengthening operational resilience.

CONTINUOUS MITIGATION

Persistent Vigilance Across Every Layer

Threats evolve constantly and security strategies must evolve alongside them. Intcom delivers solutions for continuous monitoring, managed detection and response and periodic security assessments through leading technology partners, helping organisations strengthen resilience against an ever changing threat landscape.

Intcom partners with globally recognised, industry-leading technology vendors to deliver a unified, best-of-breed defence mechanism across every digital touchpoint. Each vendor in our ecosystem is rigorously evaluated for enterprise-grade performance, regional support capability and seamless integration within a cohesive security architecture ensuring your environment is protected by the strongest available tools, not just the most widely marketed ones.

Security Domain	Business Objective	Core Technologies	Strategic Technology Partners
Network Security	Secure enterprise networks & reduce perimeter-based threats	NGFW / Security Platforms	
	Control and secure user / device access	Network Access Control	
	Protect critical DNS infrastructure & traffic	DNS Security	
Endpoint Security	Reduce ransomware risk, improve endpoint visibility	EDR / XDR / MDR	
Data Security	Prevent sensitive data leakage and strengthen data governance	Data Loss Prevention (DLP)	
	Protect enterprise communications from phishing and malware	Email Security	
	Monitor and secure critical databases against threats	Database Activity Monitoring (DAM)	
OT / IoT Security	Improve visibility across operational and industrial environments	OT / IoT Asset Visibility	
Access Security	Protect privileged accounts & critical admin access	PAM	
	Strengthen identity governance and secure user authentication	IAM	
App Security	Protect APIs and applications against modern cyber threats	API Security	
	Secure web apps & internet-facing services	Web Application Firewall	
Cloud Security	Secure hybrid and multi-cloud environments with unified visibility control	CNAPP / SASE / CSPM	

END-TO-END SECURITY CAPABILITIES

Assess · Design · Deploy · Integrate · Monitor · Optimise

Intcom delivers comprehensive cybersecurity capabilities that help enterprises simplify security operations while improving visibility, control and resilience across hybrid IT environments. Our solutions portfolio supports:

- Infrastructure Security Assessments
- Security Architecture & Consulting
- Multi-Vendor Solution Integration
- Cloud & Hybrid Security
- Threat Detection & Response
- Vulnerability & Risk Management
- Compliance & Governance Readiness

WHY ENTERPRISES CHOOSE INTCOM

Our Commitment to Security Excellence

- Multi-vendor expertise across network, cloud, endpoint, application and identity security
- Integrated security architectures aligned to business and operational priorities
- Strong ecosystem of globally recognised cybersecurity technology partners
- Advisory-led approach focused on resilience, scalability and long-term value
- End-to-end capabilities spanning assessment, deployment, integration and optimisation

READY TO STRENGTHEN YOUR SECURITY POSTURE?

Schedule Your Infrastructure Security Assessment

Intcom's security specialists help CIOs, CISOs and IT leaders evaluate their current security posture, identify critical risk areas and build a prioritised roadmap for improved cyber resilience, compliance alignment and operational readiness. From proactive defence to cloud security and identity protection. Intcom helps enterprises build resilient, scalable and future-ready cybersecurity architectures.
